Examiner's Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Referring to claims 11-21, the prior art searched and of record neither anticipates nor suggests in the claimed combinations, engraving multiple lanes, engraving cups with geometric values representing actual printing densities, calibrating engraving elements to engrave cups with geometry values prescribed by a standard calibration function to get rated printing densities, matching printing densities with individual engraving lanes by deriving and applying a corrected lane calibration based on deviations between rated and actual printing densities

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Art

The art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior does not disclose the engraving calibration technique in applicant's claimed combinations as indicated above. In Seitz (US 5831746, which is equivalent to DE 197 19 990 A1 cited in applicant's International Application), it is noted that the difference in the actual and desired volume of engraved cells (cups) is used to adjust the engraver gamma curve, and there is no suggestion of engraving as set forth in applicant's claimed combinations. There is not suggestion to combine Bardin (US 4003311 A1 cited

in applicant's International Application) with Seitz, and Bardin furthermore, does not teach all the deficiencies in Seitz with respect to applicants claimed combinations.
